

# Research data publication – why, how and where?

**Ulrike Stahl & Anja Hühnlein**  
**Information Centre and Library, Quedlinburg**

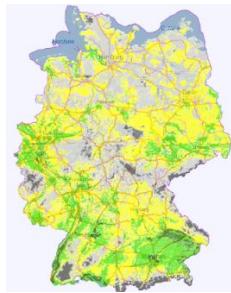

# Research data at the JKI

*"Research data are the result of a scientific working process or are produced throughout it. They encompass many different types and formats, for example measurements, audio data, texts, images, maps, software-code, simulations, surveys and samples ."*

## photometric data

detection of molecules

## geographic maps

distribution  
nutrition state  
growing area

## qualitative data

infestation  
sensory evaluation  
stress

## collections

herbaria  
sera  
preparations

## software code

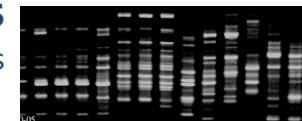

## chromatographic data

analysis of chemical compounds

## PCR- products

gene analysis

## images

phenotyping

## quantitative data

soil data, weather data,  
machine data, numbers,  
volumes, lengths, areas,  
mass of plants and animals

# Why? – everyone requests it

funding agencies, scientific organizations, publishers and councils request open access to data

*„... supports [...] open access to research data from publicly funded research“*

**nature**

PLOS ONE

*„authors are required to make materials, data, code, and associated protocols promptly available to readers [...]“*

*„... research data should be made publicly available as soon as possible“*

*„... research data should be published in suitable repositories and service centers“*

# Why? – the JKI supports it

Data Policy of the JKI was passed on 22nd of March 2017

A screenshot of the Julius Kühn-Institut (JKI) website. The header includes the JKI logo, the name "Bundesforschungsinstitut für Kulturpflanzen Federal Research Centre for Cultivated Plants", and navigation links for "Das JKI", "Themen", "Fachinstitute", "Infothek", and a search bar. A sidebar on the left is titled "Aktuell" and lists categories like "Aktuelles", "Presse", "Veranstaltungen", etc. The main content area features a news item titled "JKI verabschiedet Leitlinien zum Umgang mit Forschungsdaten" dated 03.04.2017. Below the title is a graphic of two red pushpins on a grey wavy line. The text below the graphic discusses the adoption of guidelines for research data management at the JKI.

*„The JKI supports and promotes open access to any research data that results of publicly funded research and recognizes any effort of the scientists to publish their data and make them citable.“*

[https://www.julius-kuehn.de/media/IB/PDF/IB-JKI-Leitlinien\\_Forschungsdaten.pdf](https://www.julius-kuehn.de/media/IB/PDF/IB-JKI-Leitlinien_Forschungsdaten.pdf)

# Why? – the real reason

Data Sharing and Management Snafu in 3 Short Acts

## video of NYU Health Sciences Library

Karen Hanson, Alisa Surkis and Karen Yacobucci (2012), Data Sharing and Management Snafu in 3 Short Acts, NYU Health Science Library

- research data becomes **easily accessible and re-usable for me and others**
  - no looking for, no guessing, no problems with reading and opening anymore
  
- research becomes **transparent** and will be **verifiable**
- research will be **more efficient** and **networked**
- **reputation** of the institutes and the scientists **increases**
- **integration** in national and international infrastructure becomes possible

# How? – publish data „FAIR“

*FAIR- the most accepted set of guiding principles to make data **Findable, Accessible, Interoperable, and Re-usable** to date*

Wilkinson, M. D. et al. (2016) The FAIR Guiding Principles for scientific data management and stewardship. Sci. Data 3:160018 doi: 10.1038/sdata.2016.18, <https://www.force11.org/group/fairgroup/fairprinciples>

**F**indable:      a **persistent identifier** (e.g. DOI) is assigned  
                        **metadata** (data about the data) are assigned  
                        **registered** in a searchable resource (e.g. DataCite, re3data.org)

**A**ccessible:      **retrievable by their identifier**  
                        **metadata are accessible**, even when the data are no longer available

**I**nteroperable:    a formal, accessible and broadly applicable language is used  
                        **links to other resources** (data, paper, projects) are given

**R**e-usable:        a clear and accessible **data usage license** is released  
                        **provenance information** is associated  
                        domain-relevant community **standards** are

# Where? - the praxis to publish data

## Data paper

a peer-reviewed article describing a dataset but lacks any analysis or conclusions, data is deposited in a repository with thoroughly detailed rationale and collection methods  
e.g. [ScientificData](#)

## Repository

an independent documentation of data that underlies a journal article and links to it or is unpublished to date, i.e. „stand alone“ publication  
e.g. [Pangaea](#) or [Dryad](#)

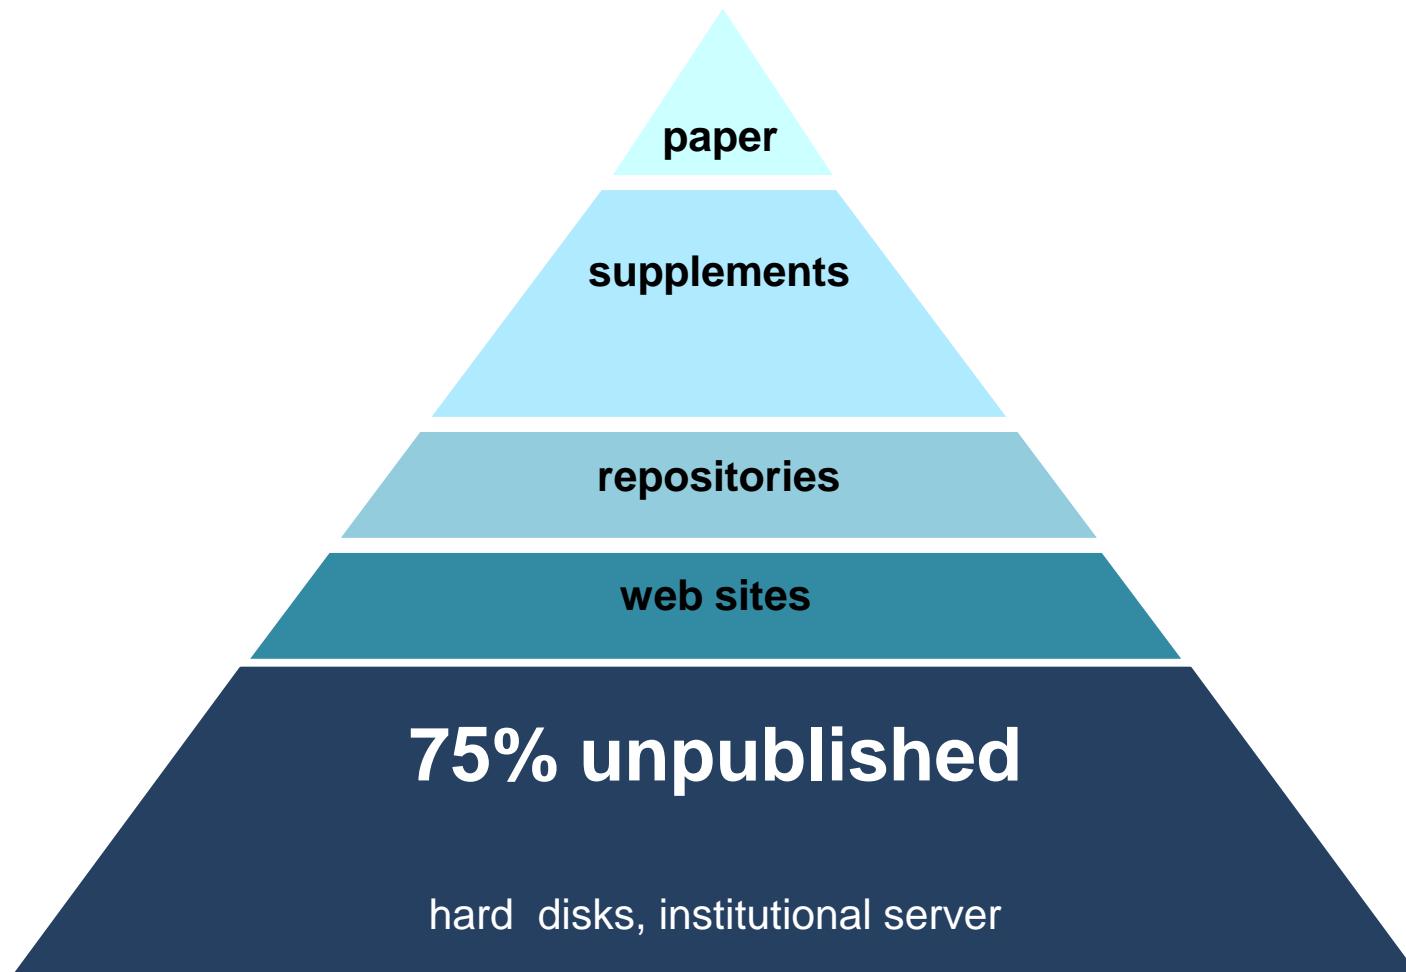

## Supplement

the traditional journal article accompanied by underlying data in the supplements, data can be hosted by the journal directly or deposited externally and is linked then  
e.g. [Apidologie](#)

## Web site

any form of data release via the personal or institutional web site  
e.g. [spreadsheet](#)

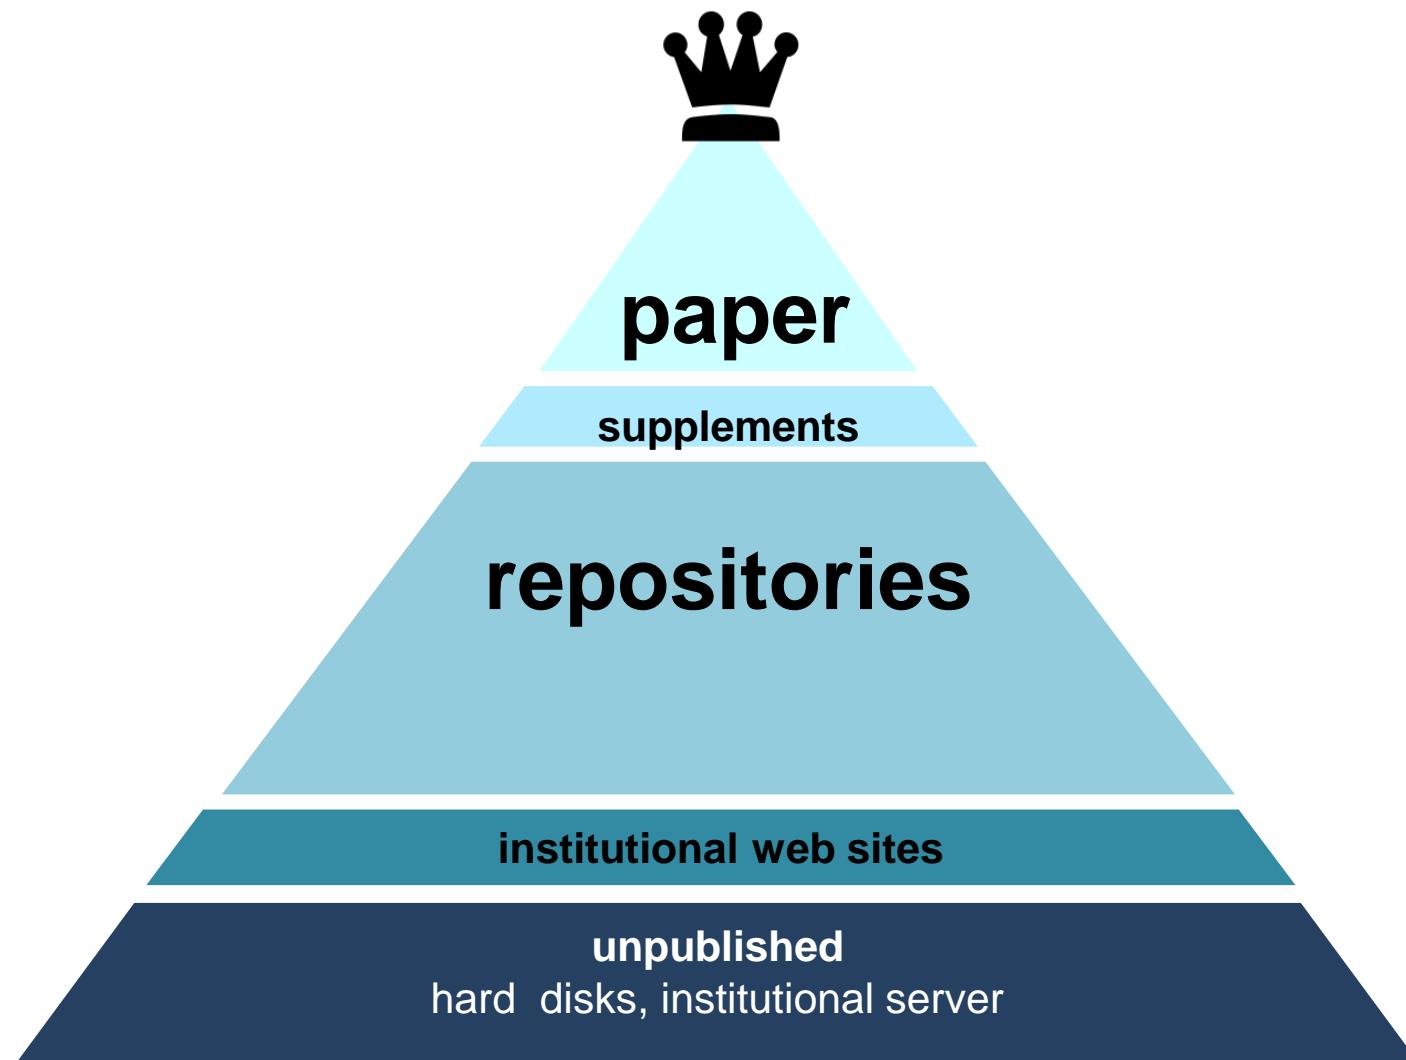

# Where? - the praxis to date

# Is the praxis „FAIR“?

	Data Paper	Repository	Supplement	Web site
Findable			 • no metadata • no identifier • not registered	 • no metadata • no identifier • seldom registered
Accessible			 • as restricted as the article	 • broken links if moved
Interoperabel			 • no standards • often size limited	 • no standards • no detailed description
Reusable			 • only reusable if OA, or explicitly stated	 • seldom free visible license

# Where? - the praxis in the future

# Where? – suitable repositories and data journals

## ➤ ZB MED list (>230 checked repositories from life science)

### Riesling grapevine canopy images for 3D reconstruction

Kicherer, Anna GND; Rose, J. Christian

Image based 3D reconstruction of whole grapevine rows for automatic field phenotyping of grape bunches and berries. Images were acquired in VSP and SMPH trained Riesling rows (at JKI Geilwelerhof Siebeldingen, Germany) using the PHENObot (Kicherer et al.2015).

# Checklist to publish and cite data

## When to publish?

- prepare data publication together with the scientific paper so that you can cite your data in your paper the first time

## Where to publish?

- first look for a FAIR subject specific repository suitable for your data
- second look for a FAIR general repository
- contact IB for publishing in OpenAgrar ([ulrike.stahl@julius-kuehn.de](mailto:ulrike.stahl@julius-kuehn.de))

## What to consider for publishing?

- prepare your data files (check abbreviations, column names, units, format)
- prepare metadata according to the requirements of the repository (author, title, contributors, abstract, keywords, resource type, date created, geo location, linked documents, funding agency/project id ...)
- think about a license (CCBY, CCO)
- contact IB for the metadata necessary for OpenAgrar

## How and when cite data?

- whenever a claim relies upon data, it should be cited
- always cite it at the finest-grained level and cite the right version
- cite it in text and put it in the reference list, only then it will be indexed
