

# ENTAM - Test Report

Sprayer type: Trade mark: Model: Trailed field crop sprayer Agrio NAPA 3800/24

Manufacturer: AGRIO MZS s.r.o. Mric 66 CZ-38203 Kremze

Test report: D - 2064

February 2017

## **Assessment table**

| No. | Contents   | Assessment |
|-----|--|------------|
| 1   | Spray tank surface roughness   | +++        |
| 2   | Spray tank over volume   | ++         |
| 3   | Volume of total residual (here max. allowed 67 l)                                      | +          |
| 4   | Spray tank contents gauge up to 20% Filling  | ++         |
| 5   | Spray tank contents gauge from 20% Filling   | ++         |
| 6   | Agitation system   | +++        |
| 7   | Width of nozzle bar section  | +++        |
| 8   | Boom height adjustment range   | ++         |
| 9   | Accuracy of pressure gauge   | +          |
| 10  | Accuracy of flow meter   | see no.14  |
| 11  | Regulation speed   | +++        |
| 12  | Even transverse distribution   | +          |
| 13  | Rinsing water tank **  | +          |
| 14  | Deviation of volume/hectare adjustment device (spray compu-<br>ter) from desired value | +          |
| 15  | Repeatability of volume/hectare adjustment device (spray com-<br>puter *               | +          |
| 16  | Pressure drop between manometer and nozzle   | +          |
| 17  | Deviation of single nozzle output from table   | ++         |

## **Technical data of sprayer**

2800 mm

3720 kg

unloaded weight:

Fig.2: View of the right sprayer side with equipment box.

The framework of the sprayer is made of steel profiles with the tank situated on the top. The pivot steering axle has a track width of 2.25 m. It is designed for a road speed of 40 km/h.

The spray tank with a nominal volume of 3800 l is made of polythene. He keeps an overvolume of 9 % to hold back foam. The pressure agitation system in the spray tank is indefinitely adjustable from 0 to maximum. The clean water

tank for rinsing and diluting holds a volume of 340 I. The hand wash tank for the operator has a volume of 17 I.

The boom is made from welded steel tubes. It can be adjusted in height indefinitely between 500 mm and 2220 mm with a vertical lift system. The pendulum range of the boom is +/- 11 ° and the slope compensation can compensate between +/-20 %. The outer 3 m segment of the boom works as obstacle give away.

Fig.3: Steel boom with outer hinges for the obstacle give away function.

#### **Description of sprayer**

Fig.4: Steel rope boom lift for the lateral folding boom.

The boom is equipped with two ultrasonic sensors for detecting and automatically keeping the adjusted boom height over ground.

Via pneumatic single nozzle switching can the nozzles be grouped together to individual spray sections, controlled by the spray computer. With the used spray computer (Müller Touch 800) it is possible to keep the spray volume constant also in case of changing speed. The unit is also equipped with track control and automatic spray section control functions. All important adjustments can be done from the driver's place. During work the following information can be shown on the display: current spray rate (I/ha), driving speed, active spray sections, flowrate, sprayed amount, sprayed area, remaining tank

contents, remaining area or distance. All necessary controls and connections for filling, agitation and inner tank cleaning are centralized on the left sprayer side. In case of blockage, the central suction filter is easy to reach and to remove on the left sprayer side. The 2 central pressure filters have to be cleaned manually.

Fig.5: Left sprayer side: induction bowl, control center with filling connections.

## **Description of sprayer**

Fig.6: Induction bowl with contents indicator and rotating nozzle for can cleaning.

The 60 I induction bowl (left sprayer side) offers 1 nozzle for flushing in. Additionally the induction bowl is equipped with a rotating nozzle for the cleaning of plant protection cans and an additional nozzle for the inner cleaning of the bowl. Therefore also a hand gun spray lance is mounted. Above all, the cap is equipped with the "easyFlow" system from Agrotop.

The flushing in can be done with a rate up to 120 l/min (with pump at 540 rpm).

\* limit: < 10 % after 7 s \*\* limit: m,ax. 6 %

\*\*\*steady state reached

#### Explanation on testing:

Testing takes place according to the Technical Instructions for ENTAM-Tests of Field Crop Sprayers (Rel.5). This procedure was developed by the competent testing authorities of the European countries participating in ENTAM and is based on the standard EN ISO 16119. This test is only a technical performance test which takes place without an accompanying field test. The test results apply only to the tested appurtenances of the sprayer. Statements on the behaviour of the sprayer with different appurtenances cannot be derived from these results.

## Responsibility and recognition

Performing competent authority: Julius Kühn-Institute (Germany) Institute for Application Techniques in Plant Protection Messeweg 11-12 D-38104 Braunschweig

## This test is recognized by the ENTAM members:
