

Whole genome shotgun sequencing (WGS) of *Rathayibacter* sp. ZW T2_19

Stoll, Dominic, Huch, Melanie

Max Rubner-Institut (MRI), Federal Research Institute of Nutrition and Food, Department of Safety and Quality of Fruit and Vegetables, Germany

ZW T2_19 is a bacterial strain of a presumptive new species belonging to the genus *Rathayibacter*. This strain was isolated from stored onions (*Allium cepa* var. Rijnsburger). This publication comprises the strain's 16S rRNA gene sequence as well as the WGS and the underlying raw sequences. The submission of this data to the public data repository NCBI (National Center for Biotechnology Information) is mandatory for the taxonomical publication of this new strain in an international peer reviewed journal.
